

Negative and Positive Impacts of Tourism on Culture

Examples serving as negative and positive impacts of tourism have been derived from two areas for the present study: one based in the Kathmandu Valley and the other in Khumbu. As yet, other cultures are little studied, or reported on, in the light of tourism. Even for the two regions above, the nature of impacts has been indicated in general terms. Some of these are taken from the earlier description of the cultural change process. Any projection of impacts for other regions, for the present, must rest on extrapolating the results from Kathmandu and Khumbu mainly.
