PREFACE

ICIMOD's approach to problem oriented research involves both knowledge reviews and field studies. The focused reviews and field studies conducted by the Mountain Farming Systems Division cover various aspects of agricultural development. Since early 1988, a series of 'state of the art' reviews of agricultural policies and programmes were sponsored by ICIMOD in different countries of the HKH Region. The purpose of these studies and the subsequent National Workshops in different countries was to understand some of the constraints and prospects of mountain area development. These exercises were also aimed at acquiring comparative perspectives of development approaches and strategies in different countries.

This paper was a part of this series of studies commissioned by ICIMOD. The paper discusses linkages among various components of the mountain farming systems and puts forward some important policy implications based on the findings of the study.

CONTENTS

	Page
I. INTRODUCTION	1
II. THE STUDY AREAS	2
General Features	2
Socioeconomic Characteristics	3
Agricultural Characteristics	4
<i>Crop Production</i>	4
<i>Livestock Production</i>	6
III. LINKAGES AMONG COMPONENTS OF THE FARMING SYSTEM	7
Concepts and Assumptions	7
Crops and Livestock	11
Crops and Forestry	11
Livestock and Forestry/Patterns	12
Linkages with the Farming Households	12
Linkages with the Market	13
IV. CONCLUSIONS AND IMPLICATIONS	14
