The REDD+ Himalaya Capacity Building Project at a Glance:
Supporting REDD Readiness in Bhutan

National Forest Inventory

1,685 cluster plots catalogued

More than 50,000 trees catalogued

National Forest Inventory Report Volume II

Above-ground understory and soil carbon assessment

339 ABG understory and soil samples collected and analysed

Forest Carbon Assessment of Bhutan

Collected and measured 3,500+ tree cores from approximately 250 tree species to assess growth and increment

Biomass allometric equation development

20 models developed

Forest Reference Emission Level

MRV REDD National Forest Monitoring System
