FOREWORD

The present discussion paper by Janardan Khatri-Chhetri and Maheswor Yadav, entitled "Off-farm Employment in Nepal: A Case Study of Naubise VDC, Dhading District", constitutes one of the six location-specific case studies of prominent/potential off-farm activities in mountain regions in the Hindu Kush-Himalayas. These case studies include horticulture, livestock, and small-scale enterprises in the townships of Wenchuan County, Sichuan Province (China), tourism and vegetable farming in Mustang and Dhading districts (Nepal), and natural resource based activities in Shangla Par Sub-division, Swat District (Pakistan).

A major issue in mountain development is to create conditions that would help enhance the carrying capacity of the mountain resources and open opportunities for sustainable improvements in the living standards of mountain communities without degrading or depleting the resource base. This is where the promotion of off-farm employment based on comparative advantages assumes such crucial significance in strategies for the development of the mountains. The critical issues, interlinkages and options in off-farm employment in the Hindu Kush-Himalayan (HKH) Region have, therefore, been given primary importance in ICIMOD's programme on Mountain Population and Employment. As part of the programme ICIMOD collaborated with institutions and professionals from China, Nepal, and Pakistan to undertake the regional overview studies on the current state of off-farm employment. This was followed by area-specific case studies on prominent and potential off-farm activities. The regional overview studies are available as part of the Discussion Paper Series of the Mountain Population and Employment Division (MPE Series 12-14).

The case studies analyse and assess the current state of off-farm employment in the respective socioeconomic and resource contexts, identify factors that have inhibited or enhanced off-farm employment and income opportunities, trace the linkages of off-farm activities with agriculture and other sectors, and present guidelines for the future development of potential off-farm opportunities.

These studies were made possible by a grant from the International Development Research Centre (IDRC), Canada, for which I am extremely grateful. ICIMOD was also fortunate to have working on these studies professionals from national institutions in China, Nepal, and Pakistan. The methodological framework and the structure of the studies were mutually agreed upon by participating researchers. From ICIMOD's side the programme was coordinated and executed by Dr. Pitamber Sharma and Dr. Deepak Bajracharya (now with UNICEF).

Readers might be interested to know that all of the six case studies (including the present one) are published under the Discussion Paper Series of the Mountain Population and Employment Division. Also, the Report of the International Workshop on Mountain Off-farm Employment, held in Kathmandu in February 1992, in which these case studies were presented, discussed, and synthesised, has also been published by ICIMOD. ICIMOD is hopeful that these studies will contribute to a better understanding of the problems and prospects of off-farm employment in the mountains.

LIST OF TABLES

2.1:	Distribution of Sample Households by Farm Strata and Ethnic Groups	6
2.2:	Distribution of Population by Broad Age Groups and Dependency Ratio	6
2.3:	Average Family Size by Ethnic Groups and by Farm Groups	7
2.4:	Existing Land Use Pattern in Naubise VDC	8
2.5:	Percentage Distribution of Sample Households by Owner Cultivator and Tenurial Status	9
2.6:	Average Owned and Cultivated Landholding by Farm Strata	9
2.7:	Area and Percentage Distribution of Operating Land by Land Type and Farm Strata	9
2.8:	Percentage Distribution of Literate Population by Farm Size	11
2.9:	Percentage Distribution of Literate Population by Ethnicity	11
2.10:	Percentage Distribution of Population by Educational Attainment and by Ethnicity	11
2.11:	Average Annual Expenditure of Sample Household by Major Headings	13
2.12:	Average Annual Cash Income of Sample Households by Different Sources	13
2.13:	Distribution of Economically-Active Population and Dependency Ratio by Farm Size	14
2.14:	Percentage Distribution of Economically-Active Population by Principal Occupation and Farm Strata	14
2.15:	Percentage Distribution of Labour Time Allocation in Various Activities by Farm Strata	15
2.16:	Percentage Distribution of Labour Day Demands in Various Activities by Month	16
3.1:	Area, Production, and Yields of Principal Crops by Farm Strata	19
3.2:	Percentage Distribution of Sample Households Growing Fruit by Farm Strata	20
3.3:	Number of Fruit Trees per Reporting Household and Production per Tree by Type of Fruit Tree	20
3.4:	Percentage Distribution of Sample Households Growing Vegetables by Types of Vegetable and Farm Strata	21
3.5:	Percentage Distribution of Households Rearing Livestock by Farm Strata	21
3.6:	Estimated Number of Livestock and Poultry by Farm Strata	22
3.7:	Average Annual Milk Production and Quantity Sold by Farm Strata	23
3.8:	Persons Involved and Percentage Distribution of Labour Days Used in Different Activities by Farm Strata	24
3.9:	Persons Involved and Percentage Distribution of Labour-days Used in Various Activities by Sex	26
3.10:	Distribution of Average Annual Income from Different Off-Farm Activities per Reporting Household	27
3.11:	Employment in Government and Non-Government Offices in Khanikhola	28
4.1:	Distribution of Area, Production, and Yields in Various Kinds of Vegetables by Farm Strata	31
4.2:	Input Use in Various Types of Vegetable by Farm Strata	32
4.3:	Extension Contact During Vegetable Farming	33
4.4:	Loans from Various Sources by Farm Strata	33
4.5:	Marketing Costs in Transporting a Quintal of Vegetables to the Wholesale Market Centre	34
4.6:	Production Costs, Marketing Costs, and Net Returns per Hectare in Tomato Production	36
4.7:	Production Costs, Marketing Costs, and Net Returns per Hectare in Potato Production	37
