

The Author

Donald Alford, born in Montana, USA, has a Ph.D in Earth Sciences from the Institute of Arctic and Alpine Research of the University of Colorado, Boulder. His initial academic research was concerned with the geophysical environments of water, as well as with the interactions between the dynamics of water flow through ecosystems and human use of those ecosystems.

Dr. Alford has worked extensively as a Consultant in Water Resources' Systems Analysis in North America, Europe, Latin America, Caribbean and Asia including the Nepal Himalayas. He is presently associated with the Montana based consulting firm, Geo Research as a Senior hydrologist.

Dr. Alford has been a fellow of the East-West Centre, Hawaii, and the International Institute for Environment and Development, Washington, D.C. and London. He is also a consulting member of the Commission on Ecology of the World Conservation Union (IUCN), Gland. He has written several papers on Snow and Glacier Study, hydrology and water resources to his credit.
