Kathmandu, Nepal

PREFACE

This Discussion Paper is an abridged version of the original study which was prepared for the International Symposium on Mountain Environmental Management, organised by ICIMOD in collaboration with UNESCO/MAB and held during April 1989. This study analyses the nature of environmental problems faced by a mountainous district in Pakistan and their causes and consequences within the given management framework. A critical evaluation of the current institutional set-up and management strategies has been undertaken to identify the gaps/shortcomings. Measures have also been suggested for the improvement of the environmental management framework in the area. The study formed part of a series of similar studies commissioned by ICIMOD in China, India, and Nepal.

Species' Extinction	3
Human Settlements: Increasing Density	3
Industries as Resource Consumers and Generators of Waste	10
Tourism and Environment	11
