The opinions expressed in this publication are those of the author(s) and do **not necessarily** reflect the views of the International Centre for Integrated Mountain Development.

The designations employed and the presentation of the material in this **publication do not** imply the expression of any opinion whatsoever, on the part of the International Centre for Integrated Mountain Development, concerning the legal status of any **country, territory, city, or area** of its authorities; or concerning the delimitation of its **frontiers and boundaries**.

IMPLEMENTATION ASPECTS OF RURAL ENERGY PLANNING WITH SPECIFIC REFERENCE TO NEPAL

This paper was prepared for the Food and Agriculture Organisation of the United Nations, Rome, and was also presented at the Regional Training Workshop on "A Comprehensive Approach to Energy Assessment and Planning for Rural and Agricultural Development", organised by FAO/ESCAP/UNDP, and held in Kathmandu, Nepal, 24-30 September, 1989.

MIT Series No. 8

The paper focuses on the specific problems and prospects of rural energy planning in the context of Nepal. It examines the state of energy programmes in the country, analyses implementation approaches - their problems and prospects, discusses institutional implications for effective energy programmes, and, finally, suggests prospects for a more effective approach to planning and implementation in the light of the existing circumstances. The authors hope that the ideas expressed herein will be of relevance, particularly in the current democratic political context of Nepal, and that the political will towards inclusion of users and beneficiaries' perspectives in programme planning and development will materialise in a more meaningful way than was possible before.

**Ganesh Ram Shrestha is Executive Director, Centre for Rural Technology, Kathmandu, and
Deepak Bajracharya is Division Head, Mountain Population and Employment Division, ICIMOD.**

We are grateful to the FAO, the UNDP, and the ICIMOD for their support and assistance. We are also grateful to the authors for their contribution to the preparation of this paper, thereby sharing their experiences in the implementation of rural energy programmes. We would also like to express our appreciation to Dr. Colin Ross (the former Director of ICIMOD) and Dr. E.F. Tache (the current Director of ICIMOD) for their encouragement and enthusiasm from the time of initiation to the final stage of publication.

CONTENTS
PREFACE

BACKGROUND AND IMPORTANT ISSUES

Important Issues in the Nepalese Context

This paper was prepared for the Food and Agriculture Organisation of the United Nations, Rome, and was also presented at the Regional Training Workshop on "A Comprehensive Approach to Energy Assessment and Planning for Rural and Agricultural Development", organised by FAO/ESCAP/UNDP, and held in Beijing, China, 24-30 September, 1989.

The paper focusses on the specific problems and prospects of rural energy planning in the context of Nepal. It examines the state of energy programmes in the country, analyses implementation approaches - their problems and prospects, discusses institutional implications for effective energy programmes, and, finally, suggests prospects for a more effective approach to planning and implementation in the light of the existing circumstances. The authors hope that the ideas expressed herein will be of relevance, particularly in the current democratic political context of Nepal, and that the political will towards inclusion of users' and beneficiaries' perspectives in programme planning and development will materialise in a more meaningful way than was possible before.

We are grateful to the FAO for making available a small grant which enabled ICIMOD to recruit one of the authors (G.R. Shrestha, then with the Agricultural Development Bank of Nepal) for a period of three months. We would like to thank Dr. Gustavo Best of FAO, in particular, for his comments on an earlier draft. ADB/N deserves thanks for complying with ICIMOD's request to second a member of its staff for the purpose of preparing this paper, thereby sharing its experiences in the implementation of rural energy programmes. We would also like to express our appreciation to Dr. Colin Rosser (the former Director of ICIMOD) and Dr. E.F. Tacke (the current Director of ICIMOD) for their encouragement and enthusiasm from the time of initiation to the final stage of publication.

V. INSTITUTIONAL IMPLICATIONS

Current Institutional Arrangements
Towards an Appropriate Institutional Framework

VI. CONCLUSIONS
