FOREWORD

The discussion paper presented here by Shanta Pandey, entitled "Women in Forest Management in Dhading District, Nepal", constitutes one of six case studies initiated by ICIMOD in conjunction with the Programme on Organisation and Management of Rural Development.

This Programme focused primarily on the organisational resources and their relationship to the management of natural resources for sustainable development and increased productivity in mountainous areas. Across the Hindu Kush-Himalayan Mountains, rural development projects are relying on different strategies for the achievement of the above goal. These strategies are being implemented within a given macro-institutional and legal framework; presumably with adequate attention given to the sociocultural context. The framework and the context limit, as well as offer, possibilities to development agencies. The purpose of the case studies was to examine innovative institutional strategies implemented in projects (carried out by governmental agencies or nongovernmental organisations) and also to analyse and assess the utility and effectiveness of indigenous resource management systems.

I would like to thank the Aga Khan Foundation for the partial financial support in running the programme. I am also grateful for the assistance we received from the Nepal-Australia Forestry Project, the Dhading District Development Project, the Aga Khan Rural Support Programme and the Pak-German Self Help Project. The programme execution from ICIMOD's side was carried out by Dr. Anis Dani (now with AKRSP) and Dr. Deepak Bajracharya.

ICIMOD was also fortunate to have engaged in collaboration with professionals from various national institutions and project implementing agencies in China, Nepal, and Pakistan. Mutual consultations were held at various planning workshops and orientation sessions in Kathmandu and at the project sites. The participating researchers eventually agreed on the methodological framework and the set of questions that they would try to address. Sufficient flexibility was left, so that, at the discretion of researchers, responses could be made to site-specific situations.

Research Methods. A combination of techniques was used during the course of the research that lasted between six months to one year.

- o Collation and analysis of existing data from government and project records.
- o Selected open-ended interviews with relevant government officials, project personnel, and key resource persons from the region.
- o Field investigations in 8-12 villages within each project area, selected purposively to cover the various strata, the variable impact of development activities, and a range of resource management activities; rapid appraisal techniques were developed and each village was visited two or three times, altogether for about 7 days, to obtain details of specific components after preparation of an initial village profile.
- o Participant observation of project activities.

The key questions that the researchers were trying to address included the following:

- o Under what circumstances do existing resource management systems undergo institutional innovations?

- o What elements of existing resource management systems can intervening agencies build on: tenurial arrangements? property relationships? organizational structures? functionaries?
- o How do different kinds of interventions compare in terms of their ability to generate sustainable development and sound environmental management?
- o How does the user group internalize the benefits and costs of using the resource? How are risks shared ? If benefits are not equally distributed, how are the losers compensated ?
- o How does the user group ration a scarce resource?
- o How does the user group respond to development opportunities and entrepreneurial endeavours?

Influencing Factors. In addition, the following set of questions, which emerged from the reviews and research already conducted by ICIMOD, were also proposed for investigation during the course of the study:

- o Is the propensity of user investment in future returns related to the resource value, i.e., to the perceived value of the resource?
- o Does the tenurial security of the resource to the user influence the time horizon of local resource management?
- o If actual users have more responsibility for management decisions over their resources, are the resources more likely to be managed for long-term productivity at less cost to the supporting agencies?
- o Does increased equity in distribution of resource benefits encourage greater participation by user groups?
- o Will a resource management function be performed more efficiently if the performer is accountable to the local user group?

Women's Role in Resource Management. A third set of key questions, which appear to be of critical importance, deals with the role of women in resource management. These are:

- o What role do women have in resource management?
- o Is the role of women of particular importance in the use of certain resources, e.g., forests, grasslands, and water ? If so, do they have any role in decision-making about, and the management of, those resources ?
- o What are the constraints on women's involvement in resource management?
- o How do women perceive their own role in regard to resource management? How do they feel their participation can be improved ?

While the present study attempts to look into all of the preceding issues, specific attention has been paid to the role of women. The subject matter focuses upon the understanding of the resource management system at local level and learning if gender specific participation had any valuable information to offer in enhancing the management of a resource. This detailed study of the management of a particular forest and the events that initiated its conservation by the community is an example of how indigenous felt-needs are, in the long run, much more effective in the management of local resources than directives coming from organizations that are neither directly involved nor concerned with these resources for their day to day needs.

Readers might be interested in knowing that all the six case studies mentioned above, including the one presented here, are brought out in the Discussion Paper Series of the Mountain Population and Employment Division (i.e., MPE Series No. 6 through 11). We would be happy if you would write to us with your comments and suggestions and join in the discussion on these important issues. ICIMOD is organising an International Workshop on the Role of Institutions in Mountain Resource Management, 1-4 May 1990, in Quetta, Baluchistan, Pakistan, to discuss many of the issues brought out by the case studies and provide a forum for interaction among researchers, development practitioners, and policy makers. The results of the Workshop are forthcoming shortly after the event takes place. ICIMOD is hopeful that these efforts would be useful in generating dialogues on organisational and institutional issues of integrated mountain development.

E.F. Tacke
Director

ACKNOWLEDGMENTS

The study would not have been possible without the support of the men and women of Hattisunde-Mahadevsthan. They were always willing to talk to me despite their work loads.

Thanks are due to Dr. Deepak Bajracharya, Anis A. Dani, and Dr. Hikmat Bista for giving me the opportunity, encouragement, and latitude to carry out the study in the way I wanted.

Dr. Kk Panday of ICIMOD, Dr. Navin K. Rai, and Mr. Rainer Schmidt of Dhading District Development Project provided me with important information on the study area.

Nima Ome, Anchala Maskey, and Balaram Banskota accompanied me in the field and were helpful in exchanging ideas. The support staff of ICIMOD provided help with the necessary equipment for the field and helped in typing the draft of this document.

Special thanks are due to Gautam Yadama for helping me edit and refine some of my ideas during the preparation of the document. I am grateful to Dr. Deepak Bajracharya, Jeannette Denholm, Greta Rana and Prabha Thacker who helped in reorganising, editing, and eventually preparing the document for publication in its current form.

Shanta Pandey
