Conventions used in this manual

All text in Italics is for the instructor. It gives the instructor hints on how to conduct the session. Some of the italicised text also provides sample answer material to questions posed by the instructor. If an instructor follows the approach contained in Italics, this will help to produce an interactive session in which participants get involved and learn more.

Bold text in the manual indicates key words that instructors and participants will find on their monitor screen when software is running.

3-D boxes with notes to instructors

The 3-D boxes throughout the course contain notes to the instructor.

This is a 3-D box with notes for the instructor. You can use it to prepare yourself before you conduct a course.

Icons

Icons appear in both the instructor manual and the participant manual. We included icons to draw attention to the text beside the icon and to give an immediate visual clue about the meaning of the material contained in the section.

***Customisation:** When you see a box like this you are strongly encouraged to modify the current topic, to make it relevant to participants..*

In the instructor manual, the stopwatch icon indicates the estimated time to deliver a section of the course.

The following margin icons appear in both the instructor and participant manuals.

This margin icon indicates an exercise that participants are to complete.

This margin icon indicates that the accompanying text is a tip about some aspect of software or the Internet.

COURSE NOTES

The notes that follow are very similar in both the instructor manual and the student manual. The difference is that in the instructor manual, there are some additional notes for instructing including answer material for questions that instructors are to ask students.

This manual is designed for a course in which participants can access the Internet. If participants do not have access to the Internet, they may nevertheless use this manual in their course and complete the exercise that require access to the Internet after the course when they do have access to the Net.

1. Introduction

Welcome to Navigating the Web. In this course you will learn how to use Netscape navigator to browse the Internet.

In order to complete successfully the exercises in this course you will need to be familiar with Microsoft Windows and the use of a mouse. You will need to know how to open programmes in Windows, how to select items in a pull-down menu, how to use a button bar, how to maximise and minimise a window, as well as how to read and select items in a Windows dialogue box. If you do not meet these requirements, we have developed a computer handbook you can use to upgrade your skills.

This manual is a reference for your personal learning. Feel free to make notes in your personal copy.

You can learn more about the ITrain Collective, of which this manual is a part, at <http://unganisha.idrc.ca/itrain> You can also join the ITrain mailing list for discussions about the use, customisation, and adaptation of the ITrain materials. To subscribe to the mailing list, send a message to <subscribe-itrain-1@lyris.idrc.ca>

Please fill out the evaluation form which you can find at the end of this manual. Your experience with the ITrain materials is important to us. Send your evaluation to itrain@unganisha.idrc.ca or to Steve Song at the *International Development and Research Centre, P.O.Box 8500, Ontario, Canada, K1G 3H9. Tel. +1 613 236 6163 or Fax. +1 613 236 7748*

2. Introductions and expectations of participants

- 1) Please introduce to the group, the person you interviewed. In a sentence or two, indicate what type of work the person does.

- 2) What experience with email does the person you introduced have?

- 3) What does the person interviewed expect to learn from this course?

3. Course objectives

- 1) to enable you to use email effectively in your work

- 2) explain basic terminology and concepts of the World Wide Web

- 3) effectively use icons on the toolbar and items in pull-down menus

- 4) perform basic Netscape Navigator tasks

- 5) interpret and deal with basic Netscape Navigator error messages

- 6) state the strengths and weaknesses of the browser Netscape Navigator and the World Wide Web

4. Information sources

1) What sources of information do you consult?

2) What are some of the positives aspects and negative aspects of some of the information sources you now consult?

3) What information is available on the Web?

4) To what extent can the Web be used as an information sources?

5. Basic terminology and concepts

1) When you are learning something new it is important to grasp basic terminology?

2) Why is it important that we grasp basic terminology?

Opening Netscape and a Web site

In order to experience Netscape first-hand we are going to open the programme. Do this now by double-clicking on the Netscape Navigator icon on your desktop.

3) What do you see when Netscape opens?

4) What is the Web from a researcher's point of view?

5) How does the Net work?

6) What if the World Wide Web (WWW), or Web?

7) How does the Web work? Select View, Document Source.

Figure 1 - A Simple Web Site

Figure 2 **HTML tags for the simple Web site**

```
<!DOCTYPE HTML PUBLIC "-//W3C//DTD HTML 3.2 Final//EN">
<HTML><HEAD><TITLE>Simple Web site</TITLE></HEAD>

<BODY>
<H1>This is my heading </H1>

This is some sample text. <p>
And some more sample text <p>

This is a list:
<ol>
<li>Item One
<li>Item Two
<li>Item Three
</ul>

This text is <b>BOLD</b> and this is <i>Italic</i>.
<p>
Here is a small table:<p>
<table border="1">
<tr><td>top left</td><td>top right</td></tr><tr>
<td>bottom left</td><td>bottom right</td></tr>
</table>

</body>
<html>
```

8) What is HTML (Hypertext Markup Language)?

9) What are the special features of HTML?

10) How does one navigate the WWW?

11) What are links or hyperlinks?

12) What is a Web site or Web page?

13) How do you reach a Web site or Web page?

14) What is a URL, pronounced U - R - L (Uniform Resource Locator).

Figure 3 **Location window showing a URL**

6. Understanding URLs

Every Web page, every document on the Web has a unique address. URLs contain letters and number understood by the Web. We can also understand what URLs mean. Understanding URLs will help you grasp some of the inner workings of the Web. In the long run you may be able to use this information to help you find useful information on the Web. We will explain more about this later when we discuss error messages, especially a 404 error.

Typically we use URLs to fetch a specific Web site. However, every item on the Net, whether it be a Web page, a graphic image, a sound file — whatever, has its own URL. We see the parts of a typical URL below and we provide explanations.

Figure 4 The part of a URL

Protocol

Indicates which convention a browser will use to access the Net. Http stands for a Web sites, ftp for FTP sites, gopher for gopher sites and file for a file on your computer.

Server name

Typically refers to a physical machine. In URLs for Web sites, this portion usually begins with www. Technically this section ends with a forward slash but you can usually omit it if you are not referring to a specific document.

Directory

This part points to specific directories on a Web server where a document is stored. Forward slashes are used to separate directories.

Document

This refers to an HTML document and it typically ends in .htm or .html.

7. *Toolbar and pull-down menus*

Figure 5 *The toolbar in Netscape Navigator*

1. What is the toolbar in Netscape?

2. If you do not know what the icons on a toolbar mean, how can you find out? First question: did we do it in the email course? Second question: how do we do it in Netscape Navigator?

Your turn: nine main icons

There are nine main icons in the default view of Netscape Navigator 3.x. To learn what the icons are — read what they say and select each one. Note your answers below.

The meaning of icons on the toolbar

Figure 6 The nine icons on the main toolbar of Netscape Navigator

Icon	Function	Icon	Function
	<i>Back</i> Displays the previous page in the history list — if there is a previous page.		<i>Open</i> Lets you enter a URL to display the specified page in the content area.
	<i>Forward</i> Displays the next page in the history list. Especially useful after you have used the back icon explained above.		<i>Print</i> Prints the current Netscape page.
	<i>Home</i> Displays the home page designated in the general preference panel.		<i>Find</i> Lets you specify a word or phrase to locate within the current Netscape page.
	<i>Reload</i> Redisplays the current Netscape page, reflecting any changes made prior to the original loading		<i>Stop</i> Halts any ongoing transfer of page information
	<i>Images</i> Loads images into pages.		

You are now beginning to know what the nine icons of the main Netscape toolbar mean. You will use them during the remainder of this course and learn them that way.

Before we do that let's look at another way to get Netscape to perform its work: menu commands.

Menu commands

The icons on the toolbar that we have reviewed above will help you perform main tasks in Netscape. However, there are additional commands that you will use. You can access over 60 commands from pull-down menus. As an example select **F**ile from the menu bar and observe the menu that drops down. (Pictured below.) Notice **P**rint. Which icon is represented by this same command?

Figure 7 Pull-down menus in Netscape

Icons or menus?

We will use both icons and menus as we learn about Netscape Navigator 3.x. If you understand icons and pull-down menus you have more options. You should decide which one you find easier and use it. At the end of the course we will give you a third option: shortcut keys. If you can handle learning three approaches at once — go ahead, learn the shortcut keys now. However, we recommend that you avoid confusion by waiting to learn shortcuts later.

8. Navigation

In order to navigate in Netscape, you will need to open a Web site. Click on the home icon in order to do this.

The main ways of navigating in Netscape are by links, scrolling and buttons (**forward**, **back** and **home**). We looked at links above. Now we will take a close look at scrolling and the three buttons.

Scrolling

Most web documents contain more information than can be presented on one screen. To see the rest of the document you use the scroll bar on the right-hand side of the window. Clicking on the downward pointing black triangle will scroll down. Clicking on the upward pointing black triangle will scroll up. You can also pick up the sliding button in the middle of the triangle buttons and reveal more of the screen that way.

Back, forward and home buttons

You can move backward and forward through links you have just visited using the **Back** and **Forward** buttons.

If either **Back** or **Forward** are “greyed out” you do not have access to them because you have not visited sites that you can return to.

Clicking on the **Home** icon will always take you to the page that was been designated as your start up page.

Your turn: navigation

Use the three buttons in the upper left-hand corner (back, forward, and home) and the scrollbar to navigate in a common Web site or Web sites identified by your instructor.

9. Bookmarks

As you use the Web you will find sites that you want to revisit. You do not have to write down the URL for those sites. You can use Netscape to record your favourite spots for you in a Bookmark file. Once you arrive at a site that you want to save, click on 1) **Bookmarks** on the menu bar, then 2) **Add Bookmark**.

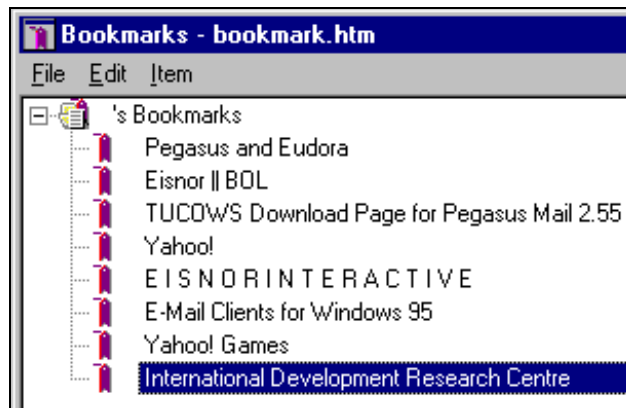

Figure 8 Organising your bookmarks

Organising your bookmarks

When you have collected several bookmarks, you will need to organise them. To start to organise your bookmarks, select 3) **Go to Bookmarks**, pictured above. After you do that a box similar to the following appears.

Figure 9 Organising your bookmarks

Customising your bookmarks

You may customise the bookmark folder that appears above by selecting **I**tem, **I**nsert **F**older . . . You may select the bookmarks you do not want and press the **D**el key. If you make a mistake and delete a bookmark you want to retain, click on **E**dit then **U**ndo.

To move a bookmark to a folder, click on the bookmark and drag it to the folder.

In the diagram above, the cursor arrow is poised to move the **I**nternational **D**evelopment **R**esearch **C**entre bookmarks to the **I**DR**C** training bookmarks.

Tip: keyboard short cut to set bookmarks

To bookmark pages quickly, select **Ctrl+D**.

Your turn

Use the links on the page you have open to take you to Web sites. Bookmark them. Set up folders to store them. Move bookmarks between folders. Once you have reorganised your bookmarks select **Ctrl+B** and view them. Delete the bookmarks you created.

10. Searching the Net with a search tool

When a library has a large number of books to store and retrieve, the organisers set up a cataloguing system. Using the catalogue, users can find the information they need. It is the same thing with the WWW. There are hundreds of millions of Web pages available to you. Undoubtedly, some of these pages contain information you could use in your research. But how do you find what you need? That is why we have search tools! They act like information retrieval tools and techniques used in libraries.

Summary of search tools

Search tools are constantly changing. They develop new techniques for finding information. New tools are developed. If you chose a well-respected search tool, chances are it will keep up-to-date and provide you good service. We have listed some of the better-known tools below, along with their URLs.

Search tools	URLs
AltaVista	http://www.altavista.digital.com/
Excite	http://www.excite.com/
HotBot	http://www.hotbot.com/
InfoSeek	http://www.InfoSeek.com/
Lycos	http://www.Lycos.com/
Yahoo!	http://www.Yahoo.com/

If you want to learn more about search tools and keep up-to-date, there are several things you can do. From time to time computer magazines review search engines and you can read some of their articles on the Web. A few are accessed from <http://www3.zdnet.com/>. This site and others have their own search tools that allow you to search their sites for information you require. Another way to get information about search tools is to consult sites such as <http://www.clark.net/pub/lshank/web/helpsearch.html> or <http://www.searchenginewatch.com/>. If you start browsing these later sites — which are very rich — remember what the purpose of your visit is. Try not to get sidetracked.

Three simple steps to do a search

1. type in www.altavista.com
2. type word pattern in the text box
3. click the button marked search, seek or go (whatever applicable)

11. Search do's and don'ts

You will reap more benefits from your Net searches if you follow a few simple tips. Here are some suggestions.

Suggestions	Explanations
1. Read the site's "how to use" section.	No matter how wonderful a search engine is, you must use it the way it was designed to be used.
2. Be precise.	Precise searches help the engine pinpoint the most relevant documents. For example, if you want to find information about a book, search the title of the book rather than the name of the author.
3. Be patient.	You might have to try out a few different searches if your first attempts are unproductive.
4. Check your spelling.	It sounds obvious, but even the best spellers make mistakes.
5. Use capitalisation where necessary.	Don't conduct a search on South Africa by typing south africa — a common error.
6. Learn simple tools to help do searches	use +,- and "" for effective searches
7. Learn about each tool.	Learn how each search engine approaches its query. Tools are always changing. As you consult the information with each tool, you can learn about other language sites, national sites and mirrored sites that work faster in your area.

12. Doing searches on the Web

We have seen that there are several search engines on the Web. We have also read about searching techniques. Web searching is an evolving field. Search tools are not perfect and perhaps they will never be. New search tools are developed. Existing tools change. And you will learn new techniques as you try new approaches. By the way, if you find a site that purports to give you all the latest information about search engines — beware, chances are the information is out of date.

One way to get a good idea of what different tools offer is to compare the results from different search engines. You will find that there is not one comprehensive search engine. They all give different results.

Yahoo

Yahoo compiles its lists of Web sites using humans, not robot-computers. Here is how you would look up health care in South Africa using Yahoo.

Type **Yahoo** in the Netscape location field. Netscape adds the additional characters to complete the URL, if it ends in “com”. So you will see **http://www.yahoo.com/** in your location bar.

From the Yahoo menus select **Countries**, under **Regional**.

Under countries select **South Africa**.

In the next menu select **Health**.

Now you can explore among the sites that Yahoo offers.

AltaVista

AltaVista uses spiders to catalogue Web sites. As well, people register their Web sites with AltaVista.

Type in the required elements of the URL: **altavista.digital**. Navigator will complete the rest. We have selected AltaVista because it is reputed to give a large number of replies to requests for information

AltaVista recommends that we try natural language queries first. We typed the following in the search text boxes: **What is health care in South Africa?** The number of document registered in Alta Vista matching this query was 5,401,314.

With adding **rural** AltaVista found 19,559,511 documents.

When we got more specific by requiring that the words be in close proximity with the following query, “heath + care + South + Africa”, we retrieved 15 documents. The more precise “health + care + rural + South + Africa” gave us no hits.

Your turn

Chose a topic that is important in your work. Do a search in Yahoo and another search engine, such as AltaVista. Compare your results.

13. Dealing with error messages

When Netscape Navigator does not find what you are looking for, the Web sends you back short, sometimes confusing messages. It helps to understand these messages and to know what you can do. Here are some thoughts.

General approach to error messages

Here are a few steps you take with all error messages.

1. Read the message carefully.
2. Accept that error messages are part of dealing with the Web
3. Repeat the action you did that led to the error message in the first place.
4. If the message repeats itself — write it down. That way you will be able to spell out the nature of your problem to someone helping you.
5. Check the basics. Are you hooked-up? Did you type accurately?
6. Try again.

If the problem persists, check the notes in this manual; decide if you need help.

If you need help, call your ISP, a colleague, or a friend.

No DNS entry

You might receive the message below after you type a URL in a browser's location toolbar. It means that your server did not locate the site you are searching. This may be due to factors such as the connection between servers is too busy with other Internet traffic, or you typed the URL incorrectly. If you check the address you typed and you find it is accurate, this error message might also mean that you have lost your telephone connection. Follow the steps recommended at the beginning of this section. You could also use a search tool to look up the name of the site. For example, in the Lycos query form type in the name of the company or site you are searching. This will find a new URL if the Webmaster has moved the site — a distinct possibility if the site is successful and has now established a new domain name.

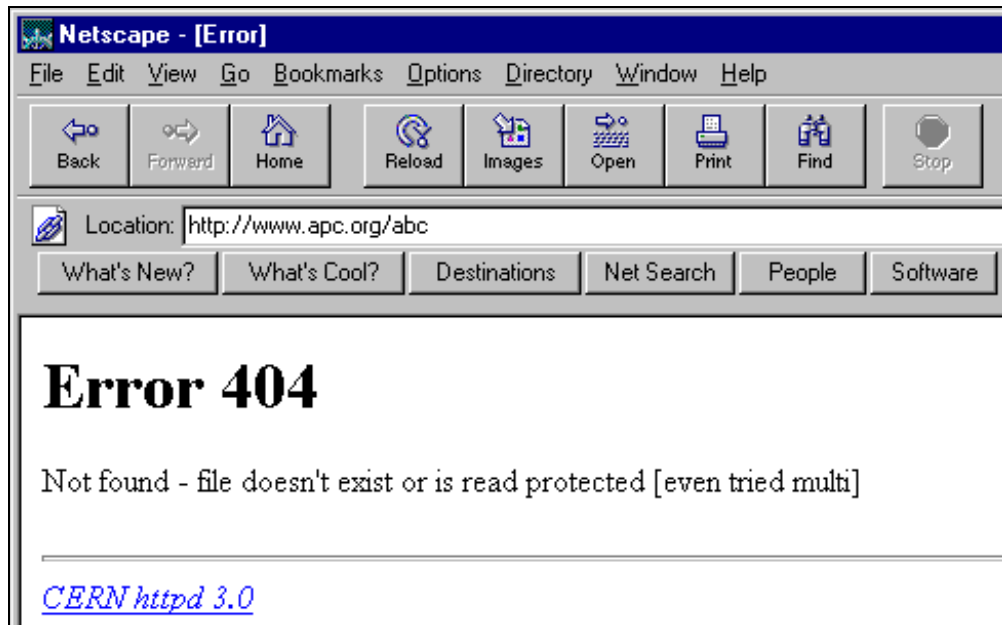

Figure 10 Error message: no DNS entry

404 error

You type a URL in the location toolbar of your browser. Your browser unsuccessfully searches for the URL. You receive the following error message.

Figure 11 Error message: 404 error

This means your server located the site (the computer) that the URL is associated with but not your specific URL. You can try to change the ending of the URL, or go to a higher level of the Web site by shortening the URL. For example, if you searched Netscape.com/downloads/ and got an error message, you could back up to Netscape.com and see if there is a link to the resources you need or you could try typing 'download' instead of 'downloads'.

Connection reset by peer

You are trying to access a site. The error message below may appear on your screen. This message simply means you either clicked the "STOP" button or moved on to another link before the server finished sending its data.

The error is usually the result of your reacting to a slow connection to the Net. If you missed a page you would like to see, the best approach is to try again. Select the reload icon.

Figure 12 *Error message: Network error: Connection reset by peer*

Network error

When you see the message below there is a good chance you are not connected to your Internet Service Provider. Look for the icon of computers and green blinking screen on the bottom right corner of your screen. If there is not one, connect to your service provider.

Figure 13 *Error message: network error*

Unable to dial-up

When you see this message below, you should first of all try again to dial. If that does not work you should check the configuration for the software you are using. Is it set up to provide you access to your Internet Service Provider?

Figure 14 Error message: dial-up

Your turn: error messages

The best way to learn about error messages is to make some intentional mistakes. Go ahead. Change a few characters in the URLs. Try connecting to the Web when you are not hooked up. Make some errors. Compare your error messages to the ones you have just read about. Practise coping with error messages by following the nine steps laid out above.

14. Saving information you find on the Net

When you find good information on the Web you could print it, but what if you lost your copy? You could also bookmark the site, and then the next time you are on the Net You could access it again. These are good ideas. While you are at it why not save the information to your hard drive? If you save a page from the Web to your hard drive, you can access it later when you are not on-line or send it via e-mail to a colleague or client. If you save your Net treasure as an HTML file, you or anyone else can view it anywhere in the world using a Web browser. (This applies to text. We explain how to save graphics in the next table.)

There are several ways to save text from the Web. You can copy the text and paste it into a word processor. Highlight the text in the file by clicking and dragging your mouse over the desired text, then press the **Ctrl + C** keys (both at the same time). This will save the text to the Windows Clipboard. You can then open Word or WordPerfect and paste the text into a document using the **Ctrl-V** keys. Finally you can e-mail the document and its URL to yourself or to someone else by selecting File/Mail Document and filling in the requested information.

Here are a few thoughts about saving information you find at Web sites.

Q Where do I save files I find?

A Set up folders that explicitly describe the subject. You have 255 characters to do this. Two dozen is plenty.

Q How do I save my treasures?

A The same as saving a file in any Windows application. You can use Ctrl +S.

Q What should I name the files?

A Like setting up folders, you have 255 characters. You can use bank spaces to separate words in the file name.

Q What characters can I not use?

A \/: *? “ ‘ <> and | are forbidden.

Q What about extensions?

A You can add a three-letter extension. Alternatively, you can let the software do it. It works well to let the software decide.

Q How do I save images on Web sites?

A All you do is right click on the image and select **Save Image As . . .**. Be sure to store them in a folder that is clearly labelled.

Q **How do I find the files after saving them?**

A If you are looking for files you worked with recently, Windows offers the last 15 in the **D**ocuments section on the **S**tart menu. **F**ind on the **S**tart menu will also help locate a folder or file.

When you find information on the Net that you wish to keep, you can also email it to yourself or someone else. That way it is referenced in an email inbox. To do this you need to configure your browser, and of course, you or another person accessing the information will also need a browser.

Your turn

Using the Web site set up by your instructor, download a file. Create a director to save it in following the suggestions listed above. Also save a Web site that is open. Set up a folder to save it in. Save it as both an html and text file.

15. Internet security

Should you make purchases via the Web? Should you type your credit card number into the Web order forms? Here are some of the facts that we must consider about Web purchases.

Q What is the source of the problem?

A Information travelling between your computer and a server can be routed through many computer systems. Any one of these computer systems could capture and misuse your information.

Q What could happen?

A Each of these computers could eavesdrop and make copies of your information. An intermediary computer could even deceive you and exchange information with you by misrepresenting itself as your intended destination.

Q Is there a complete solution?

A Security technology does not protect you from dishonest or careless people with whom you might do business. The situation is similar to telling someone your credit card number over the telephone. You have to decide whether you trust the person and the company.

Q What can I do?

A Protect yourself by dealing with secure sites. Your software has security warnings that you can turn on to indicate if sites are secure. (Unfortunately, people are not rushing to register their sites as being secure.) Symbols on browsers indicate if sites are secure. For example, in Navigator, a closed lock indicates a secure site.

Q What is the next step?

A You can learn about Security in Netscape from **Security** under **Help**.

Tip: security status

How can you tell when security is in effect? You can tell when you have a secure connection by looking at the location (URL) field. If the URL begins with https:// (instead of http://) the document comes from a secure server. The key image in the bottom left corner also indicates a secure site. If the key is broken, the site is not secure. If it is intact, the site is secure.

16. Shortcuts using Netscape

Keyboard shortcuts are wonderful ways to save time. A particularly good one in Netscape is **Ctrl + D** which creates a new bookmark. We have circled it below and we invite you to review the list and circle other keyboard shortcuts that you think will be good to use.

Ctrl + A	select all		
Ctrl + B	select all		
Ctrl + C	copy to clipboard	Ctrl+V	Paste from clipboard
Ctrl + D	add a bookmark	Ctrl + X	Cut to clipboard
Ctrl + F	find text in a document		
Ctrl +O	open file		
Ctrl + I	show image		
Ctrl +L	open location		
Ctrl + N	open new Web browser		
Ctrl + S	save the open document		
Ctrl + W	close		
Ctrl +F1	reload		
F3	find again		
Alt + <	go back		
Alt + >	go forward		

Review the shortcuts below and select the shortcut keys that you prefer. Circle the ones you select. After selecting which shortcut key you prefer, try them out.

17. Information on the Web

As we said before, the Web is like a library where you can find information on just about anything. The Web has plenty of information. However the quality is unpredictable. Whereas knowledgeable people review articles before they are published in learned journals such a process is not a requirement for publishing on the Web. Nevertheless most of the Web's information is dependable. And many reputable organisations post information to the Web. However, some of the information on the Web is not reviewed. Such information may be of dubious quality.

1. What kind of information do you think you find on the Web?

2. Who places information on the Internet?

3. Bibliographical research refers to using the Web to find books, articles and speeches in support of your research. How could you use the Web to do bibliographical research?

18. Drawbacks of using electronic sources

Frustration

1. What would you see as a source of frustration for people using the Web?

Finding sources

2. What would you think could be a problem in finding sources?

Exaggerated expectations

3. Can I find everything I need on the Web?

Learning Web research skills

4. What advice would you have for people learning computer skills?

Advice on using electronic sources

5. What advice would you have for people who are going to use electronic sources?

19. Advanced topics (optional)

Changing the toolbar in Netscape

We are going to show you how to alter your toolbar for three reasons. First, you might have a strong feeling that you prefer one approach. It could be no toolbar, text only, icons only or text and icons. Secondly, if you would like to see more on your screen, you can eliminate the toolbar and other elements of the Netscape window and see more of a Web site you have opened up. And the third reason is that someone using your computer might change the set-up. If you know how to change it back, you will probably feel more comfortable when you use Netscape — and that is important.

No icons

Figure 15 The options menu

You can hide the toolbar by selecting Options, Show Toolbar. The toolbar is hidden when the check mark does not show. You can also hide the location bar and the directory buttons. Hiding them gives you a larger viewing screen and may speed up the retrieval of Web information.

Icons only, text only, text and icons

You can alter the appearance of your toolbar by selecting Option, General Preference, Appearances and enabling options from the Toolbars menu.

Figure 16 *Changing your toolbar set up*

Your turn: changing your toolbar

Note the current setting of your toolbar. Modify your toolbar. Experiment with no toolbar, text only, icons only, as well as text and icons. After experimenting, return Netscape to the set-up before you started experimenting.

Accelerating your navigation techniques

Location field

You can speed up the viewing of the last 10 URLs you typed in the location box by clicking on the down triangle. This list will probably include more than one session. You open the URL you wish by clicking on it.

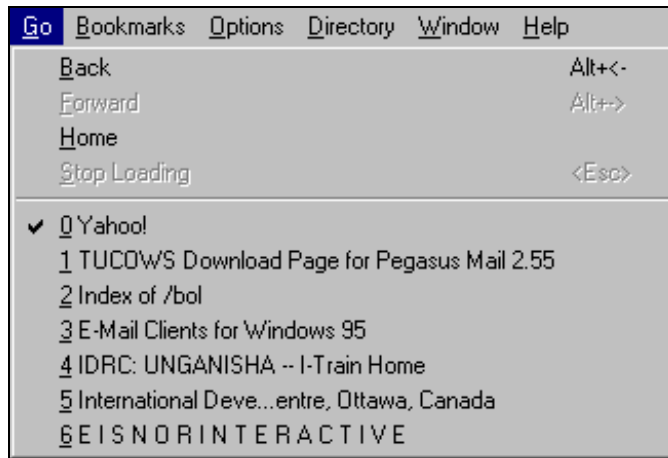

Figure 17 The last 6 URLs below the location field

Go menu list

By clicking on **Go**, in the main menu you can view URLs you have visited in the current Netscape session. This list includes URLs you inserted in the location field and links you selected and clicked on. You open the URL you have selected by clicking on it.

Figure 18 The last 6 URLs below **Go**

Stop button

From time to time it will seem like it is taking an eternity for a URL to load. You might suspect that your browser is not locating the URL you told it to find. When this happens you can stop the transfer by clicking on the stop button.

Reload button

From time to time, a page will not load properly. In such a case, you can select the reload button to retrieve a fresh copy from the server.

Your turn

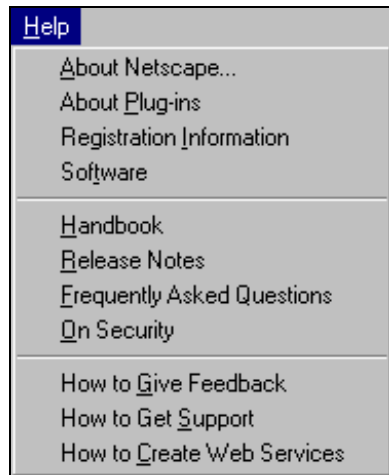

Try the different methods of accelerating your navigation explained above: using the location field, the go menu, the stop button and the reload button.

Help

Help files can be the salvation of people learning software. There are several variations on Help in Netscape.

Figure 19 Help pull-down menu in Netscape Navigator

To access the various help options select Help. The files for the first two types of help are available on your hard drive so you do not need to be connected to the Internet. To access the remaining six types of help you must be connected to the Net. At Handbook you will find a complete Netscape manual that you can download. If you would like to access the Handbook information through a comprehensive index, go to the bottom of the document.

Your turn

Access the various help options and explore them. How does this help compare to what was available in Eudora or Pegasus?

Optimising Netscape

There are several ways of speeding up Netscape. We will look at two. Auto Load Images and Cache.

Not loading images automatically

The information you require from the Web is probably in text format, so you might not need images. Typically, images automatically load into pages. Images from the Net take much more time to load on your computer than text. So eliminating images, speeds up your browser performance. You can set Netscape to not load the images by selecting **Options, Auto Load Images**. If **unchecked**, images are **not** loaded and are instead represented by small icons. If you click on an icon, the single image it represents will load. If you would like to see all images, you need to select the images icon.

Your turn: changing auto load images

Set up Navigator so that images do not load automatically. Load a Web site that contains images. Click on an image icon. Observe. Click the image icon on the toolbar. Observe what happens. Reload the file again. What happens, now that you have loaded images once?

Disk cache

When you browse Web sites, Netscape can retain a copy of html files from sites you open. It stores this file in a cache. A cache is a place where computer information is stored temporarily. Navigator uses memory and disk caches to attempt to improve performance and reduce the amount of time you are connected to your Internet Service Provider. When you exit from a session the disk cache is maintained. This means that the next time you tell Netscape to access a Web site you have already visited, Netscape will first of all check to see if the file has changed. If it has not changed Netscape will access the version of the site that is stored on your hard drive — not the one on the Web. The good news is that Navigator retrieves a page faster from cache on your computer, than the Net. The not-so-good news is that files from Web sites take up space on your hard drive.

You can influence the process described above in several ways. One is to modify the size of your cache. The default settings for cache are normally good. You can however, change the size of your cache to maximise its effectiveness. A larger cache is likely to enhance Navigator's performance, though allocating too much space can constrict other applications. You can normally set the size of the disk cache up to 5000 kilobytes. Be certain to leave at least 10% of your hard drive free.

To modify your disk cache select **Options, Network Preferences, Cache.**

Your turn: change you disk cache

Note what the disk cache setting are. Best write them down. Either change the disk cache settings and change them back or create new settings based on what your instructor suggests.

Do not alter the memory cache settings.

Clearing cache

Your cache may become bloated and start to take up excessive space on your hard drive or it may start to act strange if servers provide inaccurate page modification dates. In such cases you can purge your cache by following these steps. Select **Options, Network Preferences, Cache, Clear Memory Cache Now** and **Clear Disk Cache Now**.

Figure 20 Clearing cache

Your turn

Clear your disk cache. Do not alter you memory cache.

20. Does your organisation need a Web site?

We have learned about finding information on the Web and managing that information once you have it. We have also looked at HTML the tagging that makes Web sites possible. But do you or your organisation need a Web site? They can be an excellent way to communicate with people but there are costs associated with setting and maintaining up a Web site.

A Web site is a place on the World Wide Web with a distinct address called a Uniform Resource Locator or URL. A Web site provides information to anyone who wants to learn more about you, an idea or the products and services of an organisation you are promoting through the Web. In order to set up a Web site you need space on a server with access to the WWW, a little creativity, sound wring skills, and either knowledge of HTML tags or software that will do the tagging for you.

If you do set up a Web site

Make your site is worth visiting by providing information that is pertinent, clear and easy to access. Use bullets for emphasis. Make your site interesting graphically but do not exaggerate the number of pictures you use or the colours — because graphics slow down the transmission of your information. Test your site using low-end hardware to ensure that people with older equipment enjoy reasonable reception.

A word of caution

Setting up and managing a Web site can be a time-consuming activity. Many people comment that they never get time to update their site as much as they would like to. So be aware that having a Web site is an on-going commitment.

Using a Web site to communicate

A web site could be part of an organisation's communication strategy. Communications plans consider several factors and based on them, strategies and plans are developed for communicating with individuals and organisations. A communications plan is built on answers to questions asked directly or indirectly. To help you decide the role of the Web in you communications strategy; we will list many of the questions that need to be answered in the process of creating a communications strategy. You can consider these questions and collect you thoughts on whether you or your organisation needs a Web site.

Your turn: deciding if you need a Web site

This exercise may be done in a group or individually. Perhaps you will not be able to answer all of the questions included below and perhaps some are not relevant to your situation. If that is the case please go to the next question.

- 1) For which organisation are you developing a communications strategy for and considering a Web site?

- 2) What does the organisation do?

- 3) What does it communicate?

- 4) Why does it communicate?

- 5) With whom does it communicate?

- 6) What are the special considerations in communications between the organisation and the defined group or groups it communicates with? For example who has access to the Web?

- 7) How frequently are the communications now?

8) How frequently should the communications be in the future?

9) What are the financial costs associated with current communications?

10) What are the costs in time of people in current communications? (telephone, fax, publications and the human resources associated with these tasks.

11) Based on what we have seen in this Web course, how might the Web help the defined organisation to communicate?

12) What would be the main role of the proposed Web site

13) What would the site have to do in order to be certain it achieves the main role?

14) What information would the site contain?

15) If you decide to set up a Web site we have included some additional information below.

16) Who can help you set up a Web site?

17) Could your Web site be housed with somebody else's site?

18) Who can help to maintain your Web site?

19) Who can help you finance your site?

20) What other consideration must you take into consideration in deciding whether to set up a Web site?

21. Review

You may review your notes for this activity. You are going to select three main things you have learned in the seminar. Review these in your notes or this manual and be prepared to explain one of them to the group. We ask you to select three, because someone else might select one of the points you have chosen. By choosing three items, there should be one left by the time your turn comes.

Learning styles

In this course, we have experienced several ways of learning. There was the first part where the instructor led activities. Later, you were on your own, with the instructor available to help as needed. There were exercises, there was reading. What types of activities did you prefer?

22. Evaluation: to be completed by participants

One important part of training is to receive specific feedback from people who use the materials. With that in mind we have created a questionnaire for your comments. Please treat this questionnaire as a guideline. Feel free to add comments about any areas you feel we have missed. Please send your evaluation to the address provided in the introduction to this manual. Evaluation forms can also be filled out online at the ITrain web site: <http://unganisha.idrc.ca/itrain/evaluation/>

Your name and email address: _____

_____ Sex: male / female

Course name: _____

Duration in hours: _____ Date: _____

Location: _____

Number and sex of instructors and coaches: _____

Number and sex of students: _____

Describe in a few words your cultural background: _____

Please indicate you answers below with an x or a check.

Topics	Your level of interest			Delivery method		Level of difficulty		
	high	medium	low	leader-led	self-study	high	medium	low
1. Introduction								
2. Introductions and expectations of participants								
3. Course Objectives								
4. Basic terminology and concepts								
1. Understanding URLs								
7. Toolbar and pull-down menus								
8. Navigation								
9. Bookmarks								
10. Searching the Net with a search tool								

*I*Train - Navigating the Web - Netscape 3

Topics	Your level of interest			Delivery method		Level of difficulty		
	high	medium	low	leader-led	self-study	high	medium	low
11. Search dos and don'ts								
12. Doing searches on the Web								
13. Dealing with error messages								
14. Saving information you find on the Net								
15. Internet security								
16. Shortcuts using Netscape								
17. Information on the Web								
18. Drawbacks of electronic sources								
19. Advanced topics								
20. Does your organisation need a Web sites ?								
21. Review								

Please indicate the extent to which you agree with the following statements.

Questions	Ranking				
<i>1 strongly disagree, 2 disagree, 3 neutral, 4 agree, 5 agree strongly</i>					
	1	2	3	4	5
The introductory exercise was helpful.					
22. The notes for participants were easy to read					
23. The layout of the manual made it easy to follow.					
24. The words used in the manual were easy to understand.					
25. The explanations in the manual were easy to understand.					
26. The manual was the right length.					
27. The graphics of the manual were easy to read.					
28. This course will help me use the Internet.					
29. The training was what I thought it would be.					

31. Topics that should be added.

32. Topics that should be removed.

THE OPEN CONTENT LICENSE

<http://www.opencontent.org>

Terms and Conditions for Copying, Distributing, and Modifying

Items other than copying, distributing, and modifying the Content with which this license was distributed (such as using, etc.) are outside the scope of this license.

1. You may copy and distribute exact replicas of the OpenContent (OC) as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the OC a copy of this License along with the OC. You may at your option charge a fee for the media and/or handling involved in creating a unique copy of the OC for use offline, you may at your option offer instructional support for the OC in exchange for a fee, or you may at your option offer warranty in exchange for a fee. You may not charge a fee for the OC itself. You may not charge a fee for the sole service of providing access to and/or use of the OC via a network (e.g. the Internet), whether it be via the world wide web, FTP, or any other method.

2. You may modify your copy or copies of the OpenContent or any portion of it, thus forming works based on the Content, and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

- a) You must cause the modified content to carry prominent notices stating that you changed it, the exact nature and content of the changes, and the date of any change.
- b) You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the OC or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License, unless otherwise permitted under applicable Fair Use law.

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the OC, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the OC, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it. Exceptions are made to this requirement to release modified works free of charge under this license only in compliance with Fair Use law where applicable.

3. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to copy, distribute or modify the OC. These actions are prohibited by law if you do not accept this License. Therefore, by distributing or translating the OC, or by deriving works herefrom, you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or translating the OC.

NO WARRANTY

4. BECAUSE THE OPENCONTENT (OC) IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE OC, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE OC "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK OF USE OF THE OC IS WITH YOU. SHOULD THE OC PROVE FAULTY, INACCURATE, OR OTHERWISE UNACCEPTABLE YOU ASSUME THE COST OF ALL NECESSARY REPAIR OR CORRECTION.

IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MIRROR AND/OR REDISTRIBUTE THE OC AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE OC, EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.
